Central vs. Machine Mount Mist Collection Systems

Centralized Mist Collection Systems

In a machine shop where there are numerous CNC's, screw machines or other sources of mist, a central mist collector often makes the most sense.

By ducting multiple sources to one collector you minimize the number of different collectors that need to be maintained and installed. Typically, a single larger collector will cost less than multiple machine mount units. However, installation cost is almost always higher with a central or ducted system.

For heavier loading applications which may require an engineered solution, systems like the Smog-Hog can easily be adapted to provide greater prefiltration, more horsepower & even in-place cleaning systems.

The Smog-Hog is state-of-the art technology to take care of multiple sources of mist and smoke.

Machine Mount Mist Collectors

Machine mount mist collectors can be a very economical and effective way to control mist in both large and small machine shops. Machine mount units allow smaller shops the ability to ease into mist collection by purchasing one collector at a time.

In most cases, installation is simple enough that it can be completed in house by maintenance staff.

Individual units also save on electricity. When the machine is off, the collector is off. You do not need to run a large blower if only one source is needed.

Dedicated mist collectors can also supplement your existing Smog-Hog or other centralized system.

The MistBuster 500 machine mount mist collector is a reliable, efficient, easy to install & maintain and affordable approach to mist filtration.

Whether your need is for a central system or a dedicated machine mount system, a Dynacom, Inc. sales engineer can help you select, supply & install the correct technology for your specific application. Call today for a complete Mist Collection Package of information @ 440-543-1900.

DID YOU KNOW...

Dynacom sells replacement cartridges and filters for virtually every manufacturer of dust collectors and mist collectors. This includes: Torit, Farr, AAF, AFS, Trion, and others. Call for the best pricing in town @ **800-229-7664**.

Used But Not Abused! "Used Equipment"

Qty.	Equipment	Rating
4	SMOG-HOG SH10PE (1000 cfm never used)	10
1	Smog-Hog SG4SHM (6000 cfm tandem pass)	9
2	Smokeeter LS (concealed) tobacco smoke units	7
1	PUFS (55 gal./day) wastewater treatment system	9

Rating: New = 10

SPORTS TRIVIA

Lebron Who?

We may be impressed by Lebron's 20 points, 5 assists and 6 rebounds per game as a rookie in the NBA, but who was the most proliphic scoring rookie ever in the NBA and what was his average?

See www.dynacomonline.com for the answer!

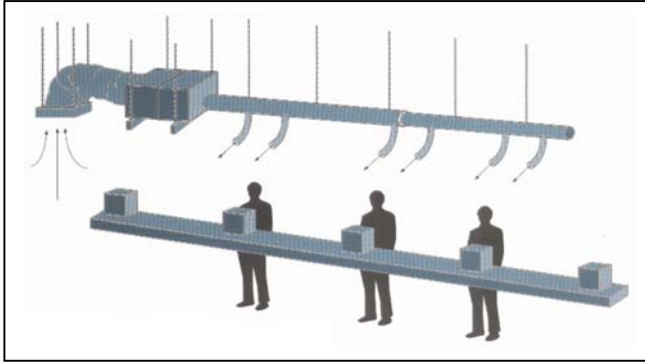

A Word To the Wise...

Definition of success: Doing the common things in life uncommonly well.

PRODUCT / INNOVATIONS

Believe it or not, now is the time to start considering what you will be doing to help keep your workers cool in the hot summer months. Uni-Spot is a localized industrial air conditioner that "Cools the worker, the product, the equipment or the process – not the whole work space."

This cuts down your air conditioning needs, and that means you save money. To learn more about Uni-Spot Industrial Spot Cooling, call **440-543-1900**.

APPLICATIONS

"Our complete shop environment has improved tremendously"

Worens Group in Streetsboro, Ohio is a growing manufacturer of hitches and other towing & trailer components. In the weld department of their new facility they are creating a dry smoke at each of six weld booths. As the part cools in the parts bin, an oily smoke is emitted into the environment.

Two different air cleaning technologies were used to address the two different types of contaminants. A reverse pulse cartridge style dust collector was used to capture and filter the dry weld smoke at the source of the weld in each of the booths. For the smoking parts, a Smokemaster F62B with a canopy hood was mounted directly over the top of the parts bin to capture and filter the oil smoke.

Per Jim Zimmer, Plant Mgr. for Worens Group, the system is doing an outstanding job. The plant has remained clean and the welders have a safe, healthy environment to work in.

***AIR IS NOT THE ONLY THING
WE FILTER...***

If you have coolants, oils or wastewater that needs to be filtered, we can help.

Dynacom, Inc. offers all types of fluid filtration technologies for grinding, machining, deburring and other applications. Call for information at **440-543-1900**.

*Do not let what you cannot do interfere
with what you can do. --John Wooden*

It Is Unwise To Pay Too Much...But Worse To Pay Too Little.

When you pay too much, you lose a little money. That is all. But when you pay too little, you sometimes lose all, because the thing you bought was incapable of doing what it was bought to do. The common law of business balance prohibits paying little and getting a lot. It can't be done.
